

ENERGY AUDITS

Linebach ■ Funkhouser, Inc.
environmental compliance & consulting

Saving energy can give any business a boost to their bottom line, but where is the most “bang for the buck”?

Linebach ■ Funkhouser knows.

LFI can determine the most cost-effective way to gain return on your money. LFI's energy audit program is tailored to **your** business and **your** goals.

Efficiency Matters.

Energy auditing catalogs and quantifies your current energy-related building systems and operations. Once this baseline is known, cost-effective energy improvements and operational changes that will result in energy savings can be identified. Audits can include any or all of your energy-related building systems, including:

- Building envelope and insulation
- Hot water systems
- Lighting systems
- Heating and Cooling Systems

LFI employees will visit the building to take measurements, collect utility data, and work closely with maintenance personnel and building occupants to gain a detailed understanding of potential energy improvements. Our report will identify recommended energy efficiency measures for installation and implementation, as well as available programs and tax credits to help pay for them.

Many times merely optimizing the existing building systems can provide substantial savings. Improper calibration of equipment, broken equipment, and poor maintenance practices can defeat a perfectly good system. Identifying the “bang for the buck” solutions with quick payback periods allows companies to prioritize any capital/O&M expenditures.

When Results Matter™
